SEPTEMBER BRINGS ANOTHER 28% RISE IN AIRBRIDGECARGO TONNAGE

AirBridgeCargo Airlines (ABC), part of Volga-Dnepr Group and one of the world's leading scheduled cargo carriers, continues to demonstrate strong performance results this year. In September the airline transported 42,480 tonnes across its network, a 28% rise YOY. ABC also reported a 35% growth in FTK YOY and a stable load factor.

Overall, during the first 9 months of 2015 AirBridgeCargo achieved some 18% growth in tonnage, carrying 344,130 tonnes across its growing global route network.

The positive result was driven by strong customer support of the airline's consistent development across existing and new markets. In September, ABC increased capacity in all of its core markets in Europe, the U.S. and Asia with additional flights from its already established stations, and has also expanded its service offering in the Asian region by introducing new weekly flights to/from Singapore.

Denis Ilin, ABC's Executive President, said the airline's international team can be proud of such a positive result. It fully reflects the positive spirit within the airline and a deep commitment to proactive collaboration with ABC's customers.

"In September, ABC moved from Test to Implementation Status for C2K reporting and demonstrated DAP (Delivered-As-Promised) performance of 87% which is among the top 5 industry scores. AirBridgeCargo's global team will definitely continue prioritising 'hard' quality as well as demonstrating a 'soft human-face' attitude to our customers to keep this trend up," he said.
