

## PRESS RELEASE – 31 July 2017

### CONSULTATIONS COMPLETED FOR PORT OF TILBURY'S NEW PORT PROPOSAL

#### Port thanks local communities for engagement on Tilbury2

The Port of Tilbury, London's major port, has now completed the statutory consultation process which invited views from the surrounding communities and statutory consultees on its proposals to build a new port terminal, TILBURY2, on the Thames close to the current port. TILBURY2 will be built on a 152 acre site which was part of the former Tilbury Power Station and will include a new deep water jetty in the river Thames.

The Port has been expanding at a fast rate over the past two decades as it has experienced a significant increase in the goods and products coming through it – as a result, businesses in the port are looking for more space. The port estimates that demand for use of its facilities will increase further in the next 15 years which the TILBURY2 proposals would support.

The statutory process closed on 28 July and was part of the second stage of seeking views from communities and key stakeholders. The port will now further develop the scheme in light of all the feedback received before submitting a formal application for a development consent order (DCO) to the Planning Inspectorate (acting on behalf of the Secretary of State for Transport) in the Autumn this year.

Commenting on this, **Peter Ward, Commercial Director at the Port of Tilbury** said: *“As a major employer in the community, it is important to us that we engaged with as many people as possible in the local areas during both the non-statutory and statutory periods in the past few months. We have had a lot of feedback from the community through our events and the website and I want to thank everyone who took the time to engage with us.*

*We will now develop our proposals for the new port into a formal application which we will submit in the Autumn. We are one of the largest ports in the South East and our customers are looking for expansion opportunities. TILBURY2 is a part of the port's overall investment strategy to achieve this.”*

The proposed terminal at Tilbury2 will act as a satellite of the main port and it is proposed that it will comprise a roll on/roll off ferry terminal for importing and exporting containers and trailers. Tilbury2 is also likely to include a facility for importing and processing bulk construction materials as well as storage of a variety of goods, including cars. The project will also include surface access proposals to link the site to the existing road and rail networks.

### Notes

#### **About The Port of Tilbury - the major gateway to London and the South East**

The Port of Tilbury is London's major port, providing fast, modern distribution services for the benefit of the South East of England and beyond. The Port of Tilbury is a dynamic and diverse port, handling the full range of cargoes with specialist expertise in the handling of paper and forest products, containers, Ro Ro, grain and bulk commodities and construction and building materials.

Tilbury's strategic location makes it a natural point for distribution, with 18 million people living within 75 miles. Serving the UK's market, the port offers customers excellent transport links to and from the UK's capital and across the South East where over 50% of the population live and work.

The port is a diverse multi-modal hub, covering around 1,100 acres and is well positioned to access the M25 orbital motorway and the rest of the UK's national motorway network. In addition, there are direct rail connections within the port, with access to the whole of the UK rail network, and dedicated barge facilities.

**Tilbury2** – Comprising 152 acres of land, including a proposed further deep water jetty, close to the east of the existing Port of Tilbury, Tilbury2 is a project which Forth Ports intends to use to extend their current operations with the creation of a new port terminal, to grow to meet the needs of their customers and market demands. It would bring the total port acreage to 1,100 acres. It is envisaged that the Tilbury2 project will also include a construction materials and short-sea shipping hub, handling imported and exported materials and goods. It is anticipated that an application for a development consent order for Tilbury2 will be submitted to the Planning Inspectorate (acting on behalf of the Secretary of State for Transport) in October 2017.
