

Wallenborn obtains GDP certification

In its quest to always be at the top of quality, service and product offering, a year ago Wallenborn embraced the process to obtain the GDP certification; being the only recognized certification by the Pharmaceutical and Healthcare industry as well as the European Authorities. Wallenborn is the first road transport provider in Luxembourg to be GDP certified.

In order to guarantee the best practices ensuring highest quality standards for the patients and consumers, the rules and regulations imposed for the transport of pharmaceuticals are very sensitive and stringent. As a result WALLENBORN prides itself in the knowledge that it is fully prepared both operationally and administratively to protect the integrity and quality of the product. Wallenborn recognizes the severe consequences to human lives that may occur if the pharmaceutical integrity is not maintained.

With this in mind, Wallenborn invested heavily in new equipment, 40 ATP certified refrigerated trailers and has formed a strong partnership with a reputable cooling unit provider with pan-European service points. Moreover, Wallenborn has consecrated a vast amount of time training their personnel with a rather unique training program in order to conform to the updated GDP norms.

The mandate within Wallenborn is to ensure that the products stay within the given temperature ranges in order to maintain the quality promised by the pharmaceutical producers to their end patients. A special emphasis has been placed within the company with regard to the patient. Wallenborn believes that they are not merely transporting goods; they are ensuring the well being of human lives. This mandate is reinforced by a strong monitoring team that runs 24/7 365 days a year.

This is yet another milestone for the Wallenborn Group reinforcing the forward thinking vision that has helped form Wallenborn into a market and industry leader.

The Wallenborn Group provides network logistic solutions in Europe with special focus on air cargo, perishable, hi-tech products and pharmaceuticals. Their innovative tailor-made solutions are unique in scope, quality, transparency and customer dedication.
