

Finnair adds capacity to London – Helsinki route to enhance service to new cargo hub in London

Finnair will add belly cargo capacity to its route between London Heathrow and Helsinki from the beginning of winter season starting on 25 October 2015. The service will operate three weekly frequencies with a wide-body aircraft, to facilitate increased cargo demand on this route.

Finnair has recently established its third cargo hub in London to better connect the United Kingdom with its extensive Asian network. Finnair has additional cargo hubs in Brussels, Belgium and Helsinki.

The added cargo capacity on the London - Helsinki route complements the freighter service Finnair and IAG Cargo share between the cities as well as the 35 weekly frequencies with A320 series aircraft.

“Our customers value Finnair’s world-class punctuality and reliability and we continue to demonstrate our commitment to offering the highest quality cargo handling. The added wide body capacity will be a great help in better connecting us with IAG Cargo's network,” says Antti Kuusenmäki, Head of Finnair Cargo.

Finnair Cargo will serve the London hub with wide-body aircraft on Mondays, Fridays and Sundays, and with freighter aircraft on Wednesdays and Saturdays.

Finnair Cargo

Finnair is the largest Nordic cargo carrier, transporting nearly 150,000 tons of freight and mail annually, with cargo logistics hubs in Helsinki, Brussels and London as well as an extensive GSA network in over 40 countries. Specialised in air cargo traffic between Europe and Asia, Finnair Cargo connects 13 cities in Asia with more than 60 destinations in Europe and North America.

Cool to care - Finnair Cargo's Nordic Pharma Chain offers reliable shipping for fragile healthcare products that require temperature-controlled transport.
